EDUCATION

College of William and Mary

M.S. / Ph.D. Program, advised by Dr. Kun Sun (GPA: 3.85/4.00)

Aug. 2014 – Aug. 2020

Williamsburg, VA

Personal Website

o Ph.D. in Computer Science, Aug. 2014 - Aug. 2020:

- * Dissertation: Hardware-Assisted Security Mechanisms on ARM-Based Multi-Core Processors
- o M.S. in Computer Science, Aug. 2014 May 2016:
 - * Thesis: Protecting Web Contents Against Persistent Crawlers

Huazhong University of Science and Technology

B.Eng. in Software Engineering, advised by Dr. Zhongping Qin

Wuhan, China Sept. 2010 - June 2014

EXPERIENCE

Facebook, Inc.

Menlo Park, CA Oct. 2020 - Now

Research Scientist

George Mason University

Fairfax, VA Oct. 2019 - July 2020

Research Assistant Part-Time

o [Mobile Security] Securing In-Band Remote Control Channels on Untrusted Mobile Devices:

- * Use TrustZone to provide a secure remote channel for the mobile device even when its rich OS is compromised
- * Propose the mechanism for deploying two isolated drivers on one shared NIC and protecting one driver with TrustZone
- * Language & tools: C, Python, iPerf

Menlo Park, CA Facebook, Inc.

- Software Engineer Intern
- July 2019 Sept. 2019
- Enhancing Facebook Android Application Security:
 - * Study and fix Android WebView-related security issues
 - * Language & tools: Java, IntelliJ IDEA

Baidu USA Sunnyvale, CA

Security Research Intern

Jan. 2019 - July 2019

- o Developing the Rust SDK for ARM TrustZone architecture:
 - * Provide the first complete Rust-safe GlobalPlatform APIs for developing TrustZone-based trusted applications
 - * Open-source GitHub project: rust-optee-trustzone-sdk
 - * Language & tools: Rust, C, OP-TEE OS

College of William and Mary Research and Teaching Assistant

Williamsburg, VA

Jan. 2015 - Jan. 2019

- o [Multi-Core Security] Scheduling TrustZone-Based Asynchronous Introspection on Multi-core Processors:
 - * Propose a technique for the untrusted OS to collect the running information of TrustZone-based software
 - * Propose a rootkit with above technique to conduct a TOCTTOU attack on TrustZone-based asynchronous introspection
 - * Propose an introspection mechanism in TrustZone to defeat the above rootkit
- o [Network Security] Detection of Persistent Distributed Crawlers:
 - * Apply SVM-based machine learning detection with 6 proposed new features to detect persistent web-page crawlers
 - * Language & tools: C, Python, PHP, LIBSVM, Scrapy, CodeIgnitor

TECHNICAL SKILLS

Programming Languages: (Proficient) C, Rust, Java, Python; (Familiar) ARM Assembly Language, C++, SQL System, Frameworks and Tools: ARM TrustZone, Git, Linux Kernel, Android, LIBSVM, CodeIgnitor

Publications
